PROFESSIONAL PROFILE

Software development is a career field I wanted to pursue for over 20 years. I began college as a Computer Science major; however, I decided to go into Social Work. Working as a Social Worker allowed me to help others but it did not diminish my desire to be a software developer. So I ventured to earn an Associate Degree in Computer Science. As a member of the Air Force, I continued to work as a Social Worker. After a rewarding career in Social Work, I decided to pursue my passion of becoming a Software developer. Software development gives me the opportunity to work with clients and mentor others as I increase my developer skills. I chose Nashville Software School because of its intense training model, diversity and business relationship with the professional technical community.

PROJECTS

Dreamer To Achiever Front End Project

I host an action board event that entails creating goals and steps by placing them on a cork board. Dreamer to Achiever is a simple application developed to allow users to track their goals on an electronic device. The user can enter a goal and steps needed to complete the goals. The user is able to edit, delete and save the goal and steps. Once the goal is achieved, the user is able to choose a reward from a drop down menu for completion of the goal. Styled application with CSS Frameworks, Bootstrap and Reactstrap. The application was developed using ReactJS.

EDUCATION

Nashville Software School

EXPERIENCE

Software Developer

Nashville Software School

May 2019 - Nov 2019

- An intensive six-month rigorous program with individual and team-based projects using technologies.
- Front-end Development:
- Utilized Git and Github for version control of applications, code, and documentation.
 - Established a Github profile to showcase individual and team-based projects.
 - Utilized HTML5, CSS3, and Flexbox to markup, style and design the personal life page of the Celebrity Tribute team-based project.
 - Incorporated Javascript, HTML, JSON, Ticketmaster API, modular, and DOM manipulation to develop an application of an itinerary for a day trip to Nashville.
 - Established verbal and written communication skills throughout the life of the project.

Back End Development:

- Server-side development fundamentals with python
- Application design by white board dependencies
- Worked in agile environment including debugging, ticketing, stand-ups, pair-programming and retrospectives
- Bangazon LLC sprint-1 included building features defined in the backlog to create a single web application using python, SQL, Django, Git, and Github.
